

# 1Gateway

## Simplify your message integration

1Gateway is a standard low-code message integration solution to connect disparate applications. It lets you act flexible and fast without the need of a developer to assure data accuracy across applications.

Today's enterprise demands are heavily depending on various data from and within the ecosystem. Reduced complexity on integration can become a competitive advantage for an IT organization. Due to the layered 1Gateway architecture message integration is simplified and empowers organization to stay flexible.

**Connection Plugins** - Choose from a variety of plugins for standard or customized endpoints.

**Normalization** - Transforms messages into a normalized format to reuse messages in other endpoints.

**Reusable Functions** - Many reusable functions typical for every integration. For example:

- **ID Map** - Keeps track of identifiers of the same record across different endpoints to know whether to insert a new record or update an existing one
- **Matcher Rules** - Evaluate whether two messages are identical to assure data accuracy and consistency across endpoints
- **Update Tracker** - determines what has changed in a message over time to eliminate noise, propagates only necessary data
- **Protocol Handler** - connects to endpoints through the native APIs for each endpoint and handles any connection error

### Benefits

- ✓ Most flexibility when adding new applications to your ecosystem or migrating from a legacy system into the cloud
- ✓ Address your business demands by combining the most suitable applications without lengthy implementation projects
- ✓ Simplicity makes integration costs predictable and reduces the total cost of ownership

### Use Cases

1Gateway is typically used for:

- **Service Desk Sync:**  
Accelerate customer onboarding
- **CMDB Synchronization:**  
Keep CI informations synced
- **Unifying Monitoring:**  
Holistic view from disparate tools
- **Replace Legacy System:**  
Make data available during transformation

«Onboarding new customers has become much faster and, combined with improved stability and flexibility, we can reduce our operational expenses.»

*Mikael Ahlberg,  
Technical Manager*

«1Gateway works so well that we often forget in daily operations that we have a central data hub for application and service monitoring.»

*Stefan Kaufmann,  
System Specialist*
